ADD AN ANNUAL PHYSICAL TO YOUR HEALTH ROUTINE

By Community Howard Regional Health

A regular health routine supports long term wellness, but knowing where to begin can feel overwhelming. One of the simplest steps you can take is scheduling an annual wellness exam — often called a physical. This yearly visit helps you stay ahead of potential health issues and build a strong relationship with your primary care provider.

WHAT IS AN ANNUAL PHYSICAL?

According to Dr. Madison Heflin, a family medicine physician with Community Family Medicine Care in Kokomo, an annual visit is more than a basic checkup. It's a proactive opportunity to talk about your lifestyle, family history, daily habits, and any concerns you may have. These conversations, paired with a physical exam, help your physician understand the full picture of your health and catch small issues before they become bigger problems.

WHAT TO EXPECT

For adults under 65, an annual physical typically includes a head to toe exam — checking your eyes, ears, nose, throat, heart, lungs, and more. Your physician may also recommend routine screenings such as BMI, cholesterol, or blood pressure checks. Depending on your health history, they may order additional tests like A1C for blood sugar, lung screenings for smokers, or heart and vascular screenings such as a heart scan or carotid artery ultrasound.

Your provider will tailor the visit to your age, medical history, and any ongoing conditions. Each year's exam builds on the last, helping you track changes and stay on top of your health goals.

FOR ADULTS 65 AND OLDER

Medicare covers a free yearly wellness visit, which differs from a traditional physical. This appointment focuses on topics like fall risk, memory, mood, sleep, diet, vision, hearing, pain, and safety. It also includes planning for recommended immunizations and screenings.

HOW TO SCHEDULE

Community Health Network makes scheduling easy through MyChart or by contacting your primary care provider. If you need a physician, use the Find a Doc tool at eCommunity.com or call Community's Connect to Care Line at 765-776-5939.

SUPPORT GROUPS, PUBLIC ASSISTANCE PROGRAMS and CALENDAR of EVENTS

Support Groups

Alzheimer Support Group
What: A peer led group for caregivers and others dealing with Alzheimer's disease.
When: first Tuesday of the month, 6:30—8 p.m.
Where: Chapel Hill Christian Church, 2600 W Alto Road, Kokomo

Healthier care for a better life

Primary and specialty care

Optum

American Health Network

Part of Optum®

You're one of a kind. Your care should be too.

We partner with you to tailor our care to your unique needs. With our primary and specialty care, you will get

- A doctor and care team focused on your unique health needs
- Faster, simpler ways to get care when and where you want it: in the office, virtually and at home
- Extra support beyond the exam room to help you reach your goals
- Lower medical costs with precisely the care you need, when you need it

STAY ACTIVE, STAY SAFE: TIPS TO PREVENT INJURIES

By Community Howard Regional Health

Spring and summer in Howard County bring plenty of opportunities to get moving — from yardwork and biking to golf, pickleball, and long walks on Kokomo's trail system. These activities are great for meeting daily exercise goals, but jumping back into a hobby after months off can lead to aches, strains, and preventable injuries. Community Howard's orthopedic and sports medicine experts share their top tips for staying safe and active all season long.

WARM UP AND EASE IN

One of the best ways to prevent injury is to prepare your body before you start. A proper warm up that includes both static and dynamic stretching helps improve flexibility and reduces strain. If you're returning to a sport like golf or pickleball, take time to relearn proper technique — even a short lesson can prevent common overuse injuries.

CHOOSE JOINT FRIENDLY ACTIVITIES

If joint pain limits your favorite hobbies, try lower impact options. Swimming, cycling, and water based exercise classes — like those offered at Kokomo Beach and Kokomo Family YMCA — reduce stress on painful joints while keeping you active.

STAY SAFE IN THE HEAT

For runners and outdoor athletes, summer heat adds extra strain. Exercise early in the day, adjust your intensity, take frequent water breaks, and stop immediately if you feel dizzy, nauseated, or overheated.

WEAR THE RIGHT SHOES

Supportive, well fitting footwear is essential. Replace worn out shoes every 6–8 months and consider cushioned inserts if you're prone to foot or ankle pain.

LISTEN TO YOUR BODY

Pain is not something to "push through." Warning signs that you may be overdoing it include:

- Pain lasting more than 48 hours
- Swelling, warmth, or redness around a joint
- Stiffness or loss of motion
- Unusual weakness or fatigue
- Changes in your form or performance
- Pain that interferes with daily activities

These symptoms may signal inflammation, early joint wear, or tendon stress. Addressing them early can prevent long term problems.

When it comes time to address an injury or nagging joint pain, Community's orthopedic and sports medicine team in Kokomo is here to help. Visit eCommunity.com/ortho or call 765.776.3100 to learn more.

LIFESAVING HEART CARE IN HOWARD COUNTY

By Community Howard Regional Health

When it comes to a heart attack, every minute matters. Quick treatment not only saves lives — it can also reduce or prevent long term damage to the heart.

That's why Community Howard Regional Health in Kokomo is home to the county's only 24/7 cardiac catheterization lab. This specialized lab provides round the clock, expert care for patients who need catheter based heart treatment.

ADVANCED HEART CARE CLOSE TO HOME

Cardiac catheterization is a minimally invasive procedure that helps doctors diagnose and treat many heart conditions, including irregular heartbeats, chest pain, heart valve issues, heart failure, and blocked arteries.

During the procedure, a thin, flexible tube called a catheter is inserted into a blood vessel in the arm, thigh, or neck and guided to the heart. This allows the care team to see how well the heart is pumping, check for narrowed or blocked vessels, measure blood pressure and oxygen levels, and look for blood clots.

This fast access to care is critical for those having a heart attack. After suffering a heart attack while running, Ramsey Grice was taken straight to the cath lab, where a 90% blockage was found and treated with a stent. Just three days later, he returned to work — and a year later, he achieved a new personal best running time.

Community Howard also provides a full range of cardiovascular, electrophysiology, and vascular services. These include angioplasty, stent placement, atrial fibrillation ablation, pacemaker implantation, and non invasive treatments for angina.

KNOW YOUR RISK

Prevention is one of the most powerful tools for protecting your heart. A heart scan can help you understand your risk for heart disease and take steps to stay healthy.

Common risk factors include high blood pressure, high cholesterol, excess weight, smoking, and family history.

Take charge of your heart health by completing the free online heart risk assessment at eCommunity.com/HRA. You'll receive a personalized report with tips and next steps to support a healthier future.

TAKE THE NEXT STEP FOR YOUR LUNG HEALTH

By Community Howard Regional Health

Our lungs are our lifelines. They're vital to every breath we take. And we want to protect them all our lives. So it's helpful to take our online Lung Health Risk Assessment (HRA) if you think you have a lung cancer risk, for early detection and better health. Community Health Network has the care and information you need for lung cancer screenings.

SHOULD I BE SCREENED FOR LUNG CANCER?

If you think you need a lung cancer screening, the answer might be yes. Lung cancer is the second most common cancer, according to the American Cancer Society. Factors such as family history, age, smoking and respiratory conditions all play a role in your lung cancer risk. The U.S. Preventative Services Task Force and Medicare eligibility criteria recommend annual lung screenings for individuals ages 50 to 77 who have a tobacco smoking history of at least 20 pack years. If you have stopped smoking, you must have quit within the last 15 years. Talk to your doctor or take the quick lung cancer online assessment at eCommunity.com/HRA to see if you should be screened.

WHAT'S INVOLVED IN LUNG SCREENINGS?

Community Howard provides ultra low-dose computed tomography (CT scan) to find abnormalities and nodules. During a CT scan, lung tissue is viewed in high resolution with less radiation — a safe, quick and painless procedure. A CT scan doesn't involve needles, and is important for lung health and cancer prevention. A CT scan may find nodules, which require more testing to see if they're cancerous or noncancerous. About 1 in 4 patients screened in Indiana has lung nodules — 96 percent aren't cancer.

WHAT IF THEY FIND SOMETHING?

At Community, we understand the fear that comes with your doctor finding a nodule or abnormality in a test. Our board-certified radiologists take a close look at your lungs using the most advanced, state-of-the-art digital technology. Results that show any potential abnormalities are also reviewed by a pulmonologist. The results are also shared with the patient's referring physician, and the pulmonologist will share recommendations for next steps, like a PET scan or biopsy.

WHERE DO I GO FOR A SCREENING?

After our online assessment identifies a serious risk for lung cancer, it's time to make an appointment for a screening. Remember to relax and take each step at a time. An order from your physician is needed to make that appointment. Once a referral is made from your physician, you physician's office will work to get insurance authorization for the scan and they will inform you on how to easily schedule your appointment at the imaging center at Community Howard.

OSTEOARTHRITIS IS COMMON CULPRIT FOR HIP AND KNEE PAIN

By Community Howard Regional Health

Millions of Americans wake up each day with stiffness in their joints, struggle to get up out of a chair because of pain in their hip or have trouble walking up steps because of pain in a knee. A common culprit for this type of joint stiffness and pain is osteoarthritis, a chronic condition that occurs when the cartilage between the joints breaks down.

Typically those with osteoarthritis will find that their pain grows worse with joint use and decreases with rest. Over time joint pain can become constant and greatly impact mobility and overall quality of life.

While there is no cure for osteoarthritis there are a number of steps that can be taken to help lessen the symptoms, such as: weight management and exercise; physical therapy and pain and anti-inflammatory medications.

Joint replacement surgery can be a final, long lasting treatment option for those with debilitating joint pain. At Community Howard Regional Health we are changing the way patients and their families think about and experience hip and knee joint replacement surgery with the Center for Joint Health, a unit dedicated to joint replacement patients.

The Center for Joint Health is comprehensive program based on a national best practice model for hip and knee replacements. Alongside a joint care coordinator, physical therapist and nurses, patients at the Center for Joint Health are navigated through the surgical and rehabilitation process from beginning to end - including their transition out of the unit and back home.

A fundamental concept of wellness is executed throughout the entire program, which incorporates advanced, minimally invasive and rapid-recovery surgical techniques —with an environment that maximizes patient recovery through education, a culture of early mobility, family involvement, and group interaction.

This unique program focuses on the entire patient experience, with the goal of getting patients back to doing the things they enjoyed before being sidelined by joint pain.

Visit eCommunity.com/jointcenter or call 765.776.3100 to learn more about hip and knee joint replacement and meet our orthopedic surgeons.

Get your mammo today

Check it off your to-do list

You're busy, but do one thing for you — make today the day you schedule your mammogram, for your peace of mind and the ones you love most.

With regular screenings, breast cancer can be found early when it's most treatable. At Ascension St. Vincent Kokomo, our doctors recommend yearly mammograms starting at age 40, or earlier if you have a family history of breast cancer.

Choose from flexible time slots and encourage a friend to schedule her mammo today, too.

- Digital 3D mammography
- Breast ultrasound and MRI
- Screening and diagnostic mammograms

ascension.org/StVincentMammogram

A 3D mammogram may require an additional fee if your insurance carrier does not cover the full cost. Please check with your carrier to determine if you will be responsible for any of the costs.

YOUR GUIDE TO A WOMEN'S WELLNESS VISIT

By Community Howard Regional Health

Wellness can mean many things — balancing work and life, spending time with friends, or fitting in a yoga class. But one essential part of wellness often gets overlooked: preventive health. A yearly visit with a Community Health Network gynecologist helps you stay ahead of potential issues and protect your long term wellbeing.

CONVERSATIONS THAT MATTER

Your wellness visit is more than a physical exam — it's a chance to talk openly about your life and health. Your provider wants to hear about your period, sexual health, and medical history, but also about the things that shape your daily life. How are your relationships? What brings you stress? Are you making time for self care? These conversations help your provider understand your whole health picture.

Together, you'll create a care plan that fits your lifestyle, whether that includes birth control, family planning, preventive screenings, or support through life's changes. A strong, ongoing relationship with your provider becomes a reliable foundation for your health.

PERSONALIZED CARE FOR YOUR NEEDS

Most women will have a pelvic exam during their annual visit. Pelvic exams are an important preventative measure, as they help check for infections, dermatologic disease, endocrine disorders, and screen for certain gynecologic cancers.

Your provider may also recommend screenings such as:

- Pap test (every three years)
- HPV test
- Thyroid test
- Monthly breast self exam
- Mammogram
- Blood pressure check
- Bone density screening

STAYING ON SCHEDULE

Pap tests are key to detecting cervical cancer early. Women 21–29 should be screened every three years. Starting at age 30, your provider may recommend a combined Pap and HPV test every five years.

HOW TO SCHEDULE

Community Health Network makes scheduling easy through MyChart or by contacting your OBGYN provider. If you need a physician, use the Find a Doc tool at eCommunity.com or call Community's Connect to Care Line at 765 776 5939.

STAYING ON TRACK WITH PREVENTATIVE SCREENINGS

By Community Howard Regional Health

Finding time to focus on your health amidst the many, many other responsibilities of life can be difficult. Too often, we only think about our health when it becomes a problem. The reality is that regular staying on track with regular health screenings is one of the best ways to protect your long-term health and quality of life. Treatment for many diseases is much easier and more effective when the issue is caught early on.

Here are four key screenings to consider for the year ahead. Schedule some time with a primary care doctor to review these screenings and other recommendations your doctor might have based on your age, family history and lifestyle.

ANNUAL PHYSICAL

Think of a physical as a yearly check-in with your primary care physician. It's a chance to update your physician on things that might affect your health and your physician will also perform physical exams, like checking your eyes, ears, nose, throat, and more. Your provider may also refer you to more specialized care or recommend changes to your lifestyle. These recommendations can be general screenings like evaluating BMI or a lipid panel to check cholesterol levels. They can also be more specific to the patient, like A1C to check blood sugar and lung screenings for smokers. Your physician might even recommend heart and vascular screenings like a heart scan, a carotid artery screening, or an abdominal aortic aneurysm screening.

MAMMOGRAM

A mammogram is a breast health screening, and it is the best tool for early detection of cancer. For most women, mammography screening should begin at age 40 and be repeated yearly. If you have a family history of breast cancer, talk to your primary care doctor about the potential need for mammograms before the age of 40.

Community Howard's Women's Center in Kokomo offers 3D screening technology, which provides a clearer picture of your breast health in one mammogram screening.

COLONOSCOPY

Colon cancer is the third most common cancer in the U.S. and in Indiana - in both men and women. There are a variety of tests for colon cancer, but colonoscopy is the most thorough way to check for both polyps and cancer. Most people should have a colonoscopy every 10 years starting at age 50. Those at high risk should start screening at an earlier age and be screened more often. In addition to screening, diet and lifestyle changes can also help prevent colon cancer.

LUNG CANCER SCREENINGS

Lung cancer is the leading cause of cancer deaths in the United States. A low-dose CT lung screening will show the lung tissue in high diagnostic detail to help you understand your risk for lung cancer. Annual lung screenings are recommended for individuals ages 50 to 80 who have a tobacco smoking history of at least 20 pack years. If you have stopped smoking, you must have quit within the last 15 years. You must also have met with your physician to discuss your eligibility, and the physician must order the CT lung screening.
